**Features**

- Full-featured Atmel AT91-based Microcontroller plus Flash, RAM and a Xilinx FPGA on a small plug-in module
- Complete GNU-ARM toolchain for MS-Windows, Linux/x86 and MacOS X available
- Powerful debug features with JTAG-carrier board and GNU debugger
- 100 k gates high-density FPGA which can integrate custom IP, such as reconfigurable peripheral or system I/O extension.

**Applications**

- RTOS-based software development (eCOS prepared)
- FPGA-based System-on-chip development
- Prototyping, industrial control and measurement
- Mobile, battery-powered platforms
- Medical equipment

**Introduction**

The AML91S100E embedded module integrates both an Atmel AT91M42800A and a Xilinx Spartan-IIIE 100k gates FPGA. The microcontroller is based on an ARM7TDMI core, a popular 32-Bit Risc CPU performing 30 MIPS.

Its rich on-chip peripherals are extended by an external Xilinx Spartan-IIIE FPGA connected to the processor's external bus. This approach lets customers benefit from numerous tools, libraries, RTOS and support for ARM-based designs. Besides, the incorporated Spartan-IIIE-series FPGA offers large resources for I/O extension and customer logic.

The embedded system module in the size of a credit card is designed for a wide range of applications.

**Specifications**

<table>
<thead>
<tr>
<th>AML91S100E</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Atmel ARM7TDMI</td>

</table>
Bundled Software

- Multi-platform GNU software tools for MS-Windows, Linux/x86 and MacOS X
- Xilinx WebPACK ISE design software - a complete FPGA design entry, simulation, synthesis and implementation suite
- Quick Start Guide
- Data sheets of the major components

All documentation is provided in English.

Packing List

- AML91S100E Board equipped with Atmel AT91M42800A, 512kB SRAM, 4MB Flash, Xilinx XC2S100E FPGA
- AMLprog programmer adapter equipped w. RS232 transceivers
- JTAG/ICE programmer adapter for printer port (ARM JTAG debugging)
- RS232 (DB9) serial debugging cable
- Parallel cable for AMLprog
- Software CD-ROM with datasheets, GNU-ARM toolchain, webpack and examples.
