Overview

Zynq PS Design with Linux Example and PHY status LED on Vivado HW-Manager.

Key Features

- PetaLinux
- SD
- ETH
- USB
- I2C
- RTC
- VIO PHY LED

Release Notes and Know Issues

Issues	Description	Workaround	To be fixed version
No known issues	---	---	---

Requirements

Software

Software	Version	Note
Vivado	2017.2	needed
SDK	2017.2	needed
PetaLinux	2017.2	needed

Hardware

Basic description of TE Board Part Files is available on [TE Board Part Files](#).

Complete List is available on <design name>/board_files/*_board_files.csv

Design supports following modules:

Module Model	Board Part Short Name	PCB Revision Support	DDR	QSPI Flash	Others	Notes
te0720-03-2if	2if	REV02, REV03	1GB	32		
te0720-03-2ifc3	2if	REV02, REV03	1GB	32	2.5 mm connector	
te0720-03-2ifc8	2if	REV02, REV03	1GB	32	32GB eMMC	
te0720-03-1qf	1qf	REV02, REV03	1GB	32		
te0720-03-1cf	1cf	REV02, REV03	1GB	32		
te0720-03-2ef	2ef	REV02, REV03	1GB	32		
te0720-03-1cr	1cr	REV02, REV03	256MB	32		
te0720-03-l1if	l1if	REV02, REV03	512MB (L)	32		
te0720-03-14s-1c	14s	REV02, REV03	1GB (L)	32		

Design supports following carriers:

Carrier Model	Notes
TE0701	<ul style="list-style-type: none"> See restrictions on usage with 7 Series Carriers: 4 x 5 SoM Carriers
TE0703	<ul style="list-style-type: none"> See restrictions on usage with 7 Series Carriers: 4 x 5 SoM Carriers Used as reference carrier.
TE0705	<ul style="list-style-type: none"> See restrictions on usage with 7 Series Carriers: 4 x 5 SoM Carriers
TE0706	<ul style="list-style-type: none"> See restrictions on usage with 7 Series Carriers: 4 x 5 SoM Carriers
TEBA0841	<ul style="list-style-type: none"> See restrictions on usage with 7 Series Carriers: 4 x 5 SoM Carriers No SD Slot available, pins goes to Pin Header For TEBA0841 REV01, please contact TE support

Additional HW Requirements:

Additional Hardware	Notes
USB Cable for JTAG/UART	Check Carrier Board and Programmer for correct type
XMOD Programmer	Carrier Board dependent, only if carrier has no own FTDI

Content

For general structure and of the reference design, see [Project Delivery](#)

Design Sources

Type	Location	Notes
------	----------	-------

Type	Location	Notes
Vivado	<design name>/block_design <design name>/constraints <design name>/ip_lib	Vivado Project will be generated by TE Scripts
SDK/HSI	<design name>/sw_lib	Additional Software Template for SDK/HSI and apps_list.csv with settings for HSI
PetaLinux	<design name>/os/petalinux	PetaLinux template with current configuration

Additional Sources

Type	Location	Notes
------	----------	-------

Prebuilt

File	File-Extension	Description
BIF-File	*.bif	File with description to generate Bin-File
BIN-File	*.bin	Flash Configuration File with Boot-Image (Zynq-FPGAs)
BIT-File	*.bit	FPGA (PL Part) Configuration File
DebugProbes-File	*.ltx	Definition File for Vivado/Vivado Labtools Debugging Interface
Diverse Reports	---	Report files in different formats
Hardware-Platform-Specification-Files	*.hdf	Exported Vivado Hardware Specification for SDK/HSI and PetaLinux
LabTools Project-File	*.lpr	Vivado Labtools Project File
OS-Image	*.ub	Image with Linux Kernel (On Petalinux optional with Devicetree and RAM-Disk)
Software-Application-File	*.elf	Software Application for Zynq or MicroBlaze Processor Systems

Download

Reference Design is only usable with the specified Vivado/SDK/PetaLinux/SDx version. Do never use different Versions of Xilinx Software for the same Project.

Reference Design is available on:

- [TE0720 "Test Board" Reference Design Download Area](#)

Design Flow

Reference Design is available with and without prebuilt files. It's recommended to use TE prebuilt files for first lunch.

Trenz Electronic provides a tcl based built environment based on Xilinx Design Flow.

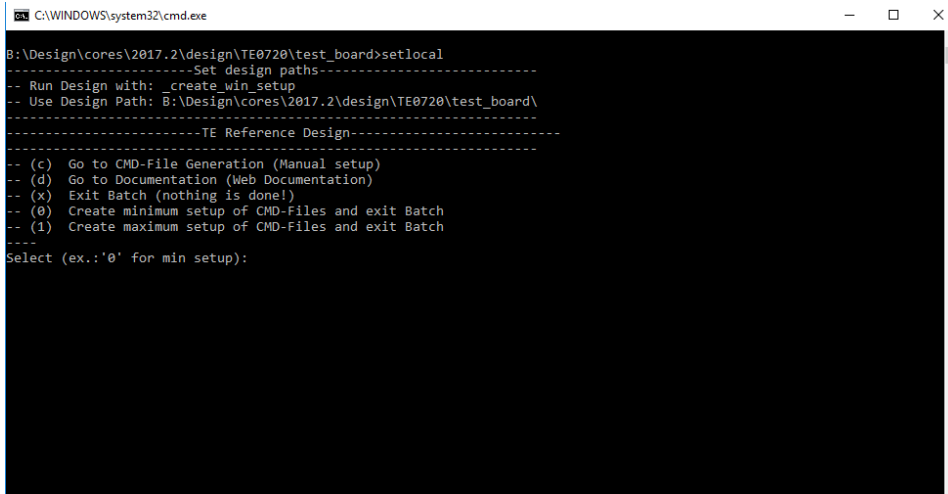

See also:

- [Vivado/SDK/SDSoC#XilinxSoftware-BasicUserGuides](#)
- [Vivado Projects](#)
- [Project Delivery.](#)

The Trenz Electronic FPGA Reference Designs are TCL-script based project. Command files for execution will be generated with "_create_win_setup.cmd" on Windows OS and "_create_linux_setup.sh" on Linux OS.

TE Scripts are only needed to generate the vivado project, all other additional steps are optional and can also executed by Xilinx Vivado/SDK GUI. For currently Scripts limitations on Win and Linux OS see: [Project Delivery Currently limitations of functionality](#)

1. _create_win_setup.cmd/_create_linux_setup.sh and follow instructions on shell:

```

C:\WINDOWS\system32\cmd.exe
B:\Design\cores\2017.2\design\TE0720\test_board>setlocal
-----Set design paths-----
-- Run Design with: _create_win_setup
-- Use Design Path: B:\Design\cores\2017.2\design\TE0720\test_board\
-----TE Reference Design-----
-- (c) Go to CMD-File Generation (Manual setup)
-- (d) Go to Documentation (Web Documentation)
-- (x) Exit Batch (nothing is done!)
-- (0) Create minimum setup of CMD-Files and exit Batch
-- (1) Create maximum setup of CMD-Files and exit Batch
-----
Select (ex.:\'0\' for min setup):
  
```

2. Press 0 and enter for minimum setup
3. (optional Win OS) Generate Virtual Drive or use short directory for the reference design (for example x:\<design name>)
4. Create Project
 - a. Select correct device and Xilinx install path on "design_basic_settings.cmd" and create Vivado project with "vivado_create_project_guiemode.cmd"

Note: Select correct one, see [TE Board Part Files](#)

5. Create HDF and export to prebuilt folder
 - a. Run on Vivado TCL: `TE::hw_build_design -export_prebuilt`
Note: Script generate design and export files into `\prebuilt\hardware\<short dir>`. Use GUI is the same, except file export to prebuilt folder
6. Create Linux (uboot.elf and image.ub) with exported HDF
 - a. HDF is exported to `"prebuilt\hardware\<short name>"`
Note: HW Export from Vivado GUI create another path as default workspace.
 - b. Create Linux images on VM, see [PetaLinux KICKstart](#)
 - i. Use TE Template from `/os/petalinux`
Note: run `init_config.sh` before you start petalinux config. This will set correct temporary path variable.
7. Add Linux files (uboot.elf and image.ub) to prebuilt folder
 - a. `"prebuilt\os\petalinux\default"` or `"prebuilt\os\petalinux\<short name>"`
Notes: Scripts select `"prebuilt\os\petalinux\<short name>"`, if exist, otherwise `"prebuilt\os\petalinux\default"`
8. Generate Programming Files with HSI/SDK
 - a. Run on Vivado TCL: `TE::sw_run_hsi`
Note: Scripts generate applications and bootable files, which are defined in `"sw_lib\apps_list.csv"`
 - b. (alternative) Start SDK with Vivado GUI or start with TE Scripts on Vivado TCL: `TE::sw_run_sdk`
Note: See [SDK Projects](#)

Launch

Programming

Check Module and Carrier TRMs for proper HW configuration before you try any design.

Xilinx documentation for programming and debugging: [Vivado/SDK/SDSoC-Xilinx Software Programming and Debugging](#)

QSPI

Not used on this Example.

SD

1. Copy image.ub and Boot.bin on SD-Card.
 - For correct prebuilt file location, see <design_name>/prebuilt/readme_file_location.txt
2. Set Boot Mode to SD-Boot.
 - Depends on Carrier, see carrier TRM.
3. Insert SD-Card in SD-Slot.

JTAG

Not used on this Example.

Usage

1. Prepare HW like described on section [Programming](#)
2. Connect UART USB (most cases same as JTAG)
3. Select SD Card as Boot Mode
Note: See TRM of the Carrier, which is used.
4. Power On PCB
Note: 1. Zynq Boot ROM loads FSBL from SD into OCM, 2. FSBL loads U-boot from SD into DDR, 3. U-boot load Linux from SD into DDR

Linux

1. Open Serial Console (e.g. putty)
 - a. Speed: 115200
 - b. COM Port: Win OS, see device manager, Linux OS see dmesg |grep tty (UART is *USB1)

2. Linux Console:

Note: Wait until Linux boot finished For Linux Login use:

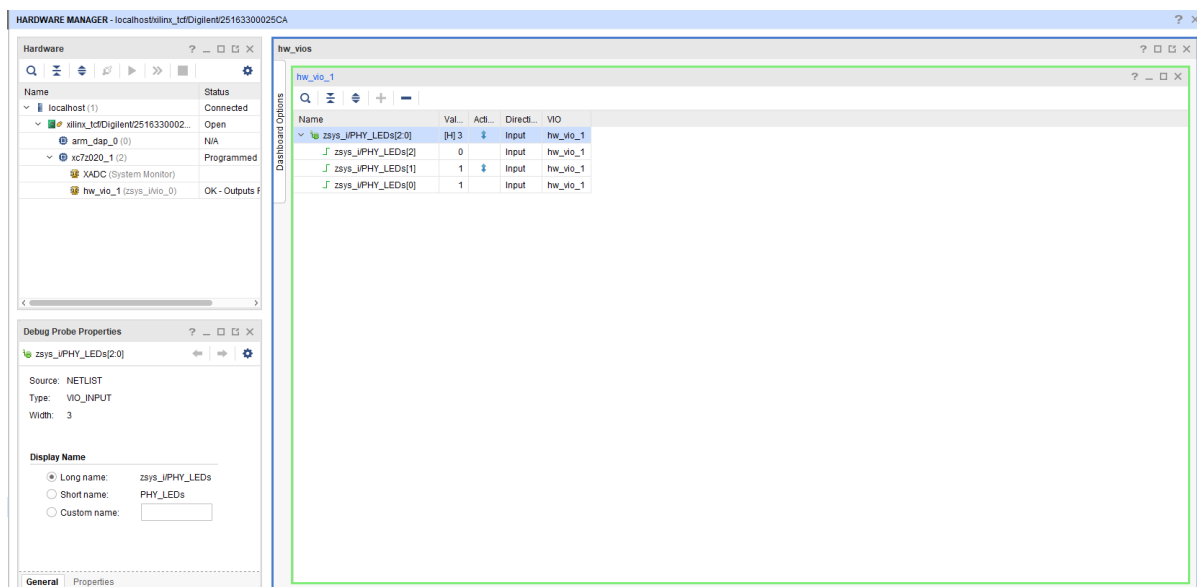

- User Name: root
- Password: root

3. You can use Linux shell now.

- I2C 0 Bus type: `i2cdetect -y -r 0`
- I2C 1 Bus type: `i2cdetect -y -r 1`
- RTC check: `dmesg | grep rtc`
- ETH0 works with udhcpd
- USB: insert USB device

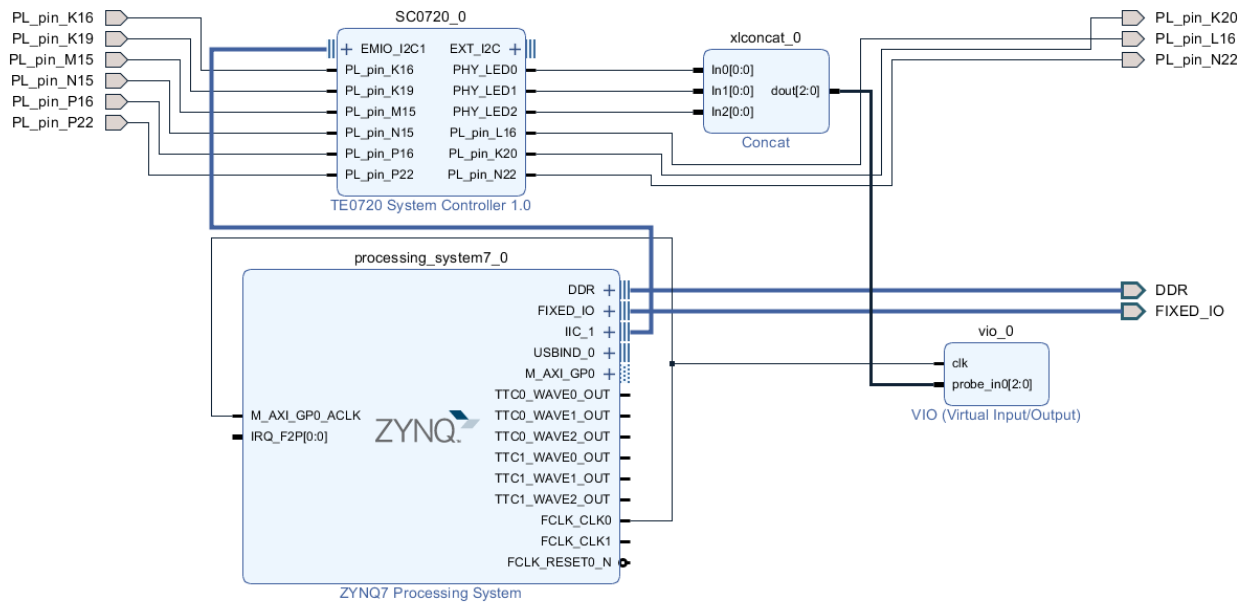

Vivado HW Manager

- Open Vivado HW-Manager and add VIO signal to dashboard (*.ltx located on prebuilt folder).
- PHY LED:

System Design - Vivado

Block Design

PS Interfaces

Type	Note
DDR	---
QSPI	MIO
ETH0	MIO
USB0	MIO
SD0	MIO
SD1	MIO
UART0	MIO
UART1	MIO
I2C0	MIO
I2C1	EMIO
GPIO	MIO
TTC	EMIO

Constraints

Basic module constraints

```
_i_bitgen_common.xdc
```

```
#  
# Common BITGEN related settings for TE0720 SoM  
#  
set_property BITSTREAM.GENERAL.COMPRESS TRUE [current_design]  
set_property CONFIG_VOLTAGE 3.3 [current_design]  
set_property CFGBVS VCCO [current_design]
```

```
_i_common.xdc
```

```
#  
set_property BITSTREAM.CONFIG.UNUSEDPIN PULLUP [current_design]
```

Design specific constrain

```
_i_TE0720-SC.xdc
```

```
#  
# Constraints for System controller support logic  
#  
set_property PACKAGE_PIN K16 [get_ports PL_pin_K16]  
set_property PACKAGE_PIN K19 [get_ports PL_pin_K19]  
set_property PACKAGE_PIN K20 [get_ports PL_pin_K20]  
set_property PACKAGE_PIN L16 [get_ports PL_pin_L16]  
set_property PACKAGE_PIN M15 [get_ports PL_pin_M15]  
set_property PACKAGE_PIN N15 [get_ports PL_pin_N15]  
set_property PACKAGE_PIN N22 [get_ports PL_pin_N22]  
set_property PACKAGE_PIN P16 [get_ports PL_pin_P16]  
set_property PACKAGE_PIN P22 [get_ports PL_pin_P22]  
  
#  
# If Bank 34 is not 3.3V Powered need change the IOSTANDARD  
#  
set_property IOSTANDARD LVCMOS33 [get_ports PL_pin_P22]  
set_property IOSTANDARD LVCMOS33 [get_ports PL_pin_P16]  
set_property IOSTANDARD LVCMOS33 [get_ports PL_pin_N22]  
set_property IOSTANDARD LVCMOS33 [get_ports PL_pin_N15]  
set_property IOSTANDARD LVCMOS33 [get_ports PL_pin_M15]  
set_property IOSTANDARD LVCMOS33 [get_ports PL_pin_L16]  
set_property IOSTANDARD LVCMOS33 [get_ports PL_pin_K20]  
set_property IOSTANDARD LVCMOS33 [get_ports PL_pin_K19]  
set_property IOSTANDARD LVCMOS33 [get_ports PL_pin_K16]
```

Software Design - SDK/HSI

For SDK project creation, follow instructions from:

[SDK Projects](#)

Application

FSBL

TE modified 2017.2 FSBL

Functions:

- Read EEPROM MAC Address and make Address accessible by UBOOT (need defines on uboot platform-top.h)
- Read CPLD Firmware and SoC Type
- Configure Marvell PHY

Changes:

- Add `te_fsbl_config.h`, `te_fsbl_hooks.h` `te_fsbl_hooks.c`, and include into `fsbl_hooks.c`

U-Boot

U-Boot.elf is generated with PetaLinux. SDK/HSI is used to generate Boot.bin.

Software Design - PetaLinux

For PetaLinux installation and project creation, follow instructions from:

- [PetaLinux KICKstart](#)

Config

- Subsystem Auto Hardware Settings: Serial Settings: ps7_uart_0

U-Boot

```
#include <configs/platform-auto.h>

#define UBOOT_ENV_MAGIC 0xCAFEBADE
#define UBOOT_ENV_MAGIC_ADDR 0xFFFFFC00
#define UBOOT_ENV_ADDR 0xFFFFFC04
```

Device Tree

```
/include/ "system-conf.dtsi"
/ {
};

/* default */

/* Flash */
&qspi {
    flash0: flash@0 {
        compatible = "w25q256";
    };
};

/* ETH PHY */
&gem0 {
    phy-handle = <&phy0>;
    mdio {
        #address-cells = <1>;
        #size-cells = <0>;
        phy0: phy@0 {
            compatible = "marvell,88e1510";
            device_type = "ethernet-phy";
            reg = <0>;
        };
    };
};
```

```
};

/* USB PHY */

/{
    usb_phy0: usb_phy@0 {
        compatible = "ulpi-phy";
        //compatible = "usb-nop-xceiv";
        #phy-cells = <0>;
        reg = <0xe0002000 0x1000>;
        view-port = <0x0170>;
        drv-vbus;
    };
};

&usb0 {
    dr_mode = "host";
    //dr_mode = "peripheral";
    usb-phy = <&usb_phy0>;
};

/* I2C need I2C1 connected to te0720 system controller ip */
&i2c1 {

    iexp@20 {          // GPIO in CPLD
        #gpio-cells = <2>;
        compatible = "ti,pcf8574";
        reg = <0x20>;
        gpio-controller;
    };

    iexp@21 {          // GPIO in CPLD
        #gpio-cells = <2>;
        compatible = "ti,pcf8574";
        reg = <0x21>;
        gpio-controller;
    };

    rtc@6F {           // Real Time Clock
        compatible = "isl12022";
        reg = <0x6F>;
    };
};
```

Kernel

Activate:

- RTC_DRV_ISL12022

Rootfs

Activate:

- i2c-tools

Applications

startup

Script App to load init.sh from SD Card if available.

See: \os\petalinux\project-spec\meta-user\recipes-apps\startup\files

Additional Software

No additional software is needed.

Data privacy

Please also note our data protection declaration at <https://www.trenz-electronic.de/en/Data-protection-Privacy>

Document Warranty

The material contained in this document is provided "as is" and is subject to being changed at any time without notice. Trenz Electronic does not warrant the accuracy and completeness of the materials in this document. Further, to the maximum extent permitted by applicable law, Trenz Electronic disclaims all warranties, either express or implied, with regard to this document and any information contained herein, including but not limited to the implied warranties of merchantability, fitness for a particular purpose or non infringement of intellectual property. Trenz Electronic shall not be liable for errors or for incidental or consequential damages in connection with the furnishing, use, or performance of this document or of any information contained herein.

Limitation of Liability

In no event will Trenz Electronic, its suppliers, or other third parties mentioned in this document be liable for any damages whatsoever (including, without limitation, those resulting from lost profits, lost data or business interruption) arising out of the use, inability to use, or the results of use of this document, any documents linked to this document, or the materials or information contained at any or all such documents. If your use of the materials or information from this document results in the need for servicing, repair or correction of equipment or data, you assume all costs thereof.

Copyright Notice

No part of this manual may be reproduced in any form or by any means (including electronic storage and retrieval or translation into a foreign language) without prior agreement and written consent from Trenz Electronic.

Technology Licenses

The hardware / firmware / software described in this document are furnished under a license and may be used /modified / copied only in accordance with the terms of such license.

Environmental Protection

To confront directly with the responsibility toward the environment, the global community and eventually also oneself. Such a resolution should be integral part not only of everybody's life. Also enterprises shall be conscious of their social responsibility and contribute to the preservation of our common living space. That is why Trenz Electronic invests in the protection of our Environment.

REACH, RoHS and WEEE

REACH

Trenz Electronic is a manufacturer and a distributor of electronic products. It is therefore a so called downstream user in the sense of [REACH](#). The products we supply to you are solely non-chemical products (goods). Moreover and under normal and reasonably foreseeable circumstances of application, the goods supplied to you shall not release any substance. For that, Trenz Electronic is obliged to neither register nor to provide safety data sheet. According to present knowledge and to best of our knowledge, no [SVHC \(Substances of Very High Concern\) on the Candidate List](#) are contained in our products. Furthermore, we will immediately and unsolicited inform our customers in compliance with REACH - Article 33 if any substance present in our goods (above a concentration of 0,1 % weight by weight) will be classified as SVHC by the [European Chemicals Agency \(ECHA\)](#).

RoHS

Trenz Electronic GmbH herewith declares that all its products are developed, manufactured and distributed RoHS compliant.

WEEE

Information for users within the European Union in accordance with Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on waste electrical and electronic equipment (WEEE).

Users of electrical and electronic equipment in private households are required not to dispose of waste electrical and electronic equipment as unsorted municipal waste and to collect such waste electrical and electronic equipment separately. By the 13 August 2005, Member States shall have ensured that systems are set up allowing final holders and distributors to return waste electrical and electronic equipment at least free of charge. Member States shall ensure the availability and accessibility of the necessary collection facilities. Separate collection is the precondition to ensure specific treatment and recycling of waste electrical and electronic equipment and is necessary to achieve the chosen level of protection of human health and the environment in the European Union. Consumers have to actively contribute to the success of such collection and the return of waste electrical and electronic equipment. Presence of hazardous substances in electrical and electronic equipment results in potential effects on the environment and human health. The symbol consisting of the crossed-out wheeled bin indicates separate collection for waste electrical and electronic equipment.

Trenz Electronic is registered under WEEE-Reg.-Nr. DE97922676.
