## 4 Overview

---

Design example with Linux and PLL frequency monitoring over VIO.

Refer to <http://trenz.org/teb0912-info> for the current online version of this manual and other available documentation.

### 4.1 Key Features

---

- Vitis/Vivado 2019.2
- PetaLinux
- SD
- 2x ETH
- CAN
- I2C
- PCIe
- FMeter
- LED
- Modified FSBL S15395 programming
- Special FSBL for QSPI programming

### 4.2 Revision History

---

| Date       | Vivado | Project Built   | Authors       | Description   |
|------------|--------|---|---------------|---|
| 2020-06-10 | 2019.2 | TEB0912-test_board_noprebuilt-vivado_2019.2-build_12_20200610085718.zip<br>TEB0912-test_board-vivado_2019.2-build_12_20200610085620.zip | John Hartfiel | <ul style="list-style-type: none"> <li>• initial release</li> </ul> |

**Table 1: Design Revision History**

### 4.3 Release Notes and Known Issues

---

| Issues          | Description | Workaround | To be fixed version |
|-----------------|-------------|------------|---------------------|
| No known issues | ---         | ---        | ---                 |

**Table 2: Known Issues**

## 4.4 Requirements

---

### 4.4.1 Software

---

| Software            | Version | Note   |
|---------------------|---------|--|
| Vitis               | 2019.2  | needed, Vivado is included into Vitis installation |
| PetaLinux           | 2019.2  | needed   |
| SI ClockBuilder Pro | ---     | optional   |

**Table 3: Software**

### 4.4.2 Hardware

---

Basic description of TE Board Part Files is available on [TE Board Part Files](#).<sup>1</sup>

Complete List is available on <design name>/board\_files/\*\_board\_files.csv

Design supports following modules:

| Module Model       | Board Part Short Name | PCB Revision Support | DDR | QSPI Flash | EMMC | Others     | Notes |
|--------------------|-----------------------|----------------------|-----|------------|------|------------|-------|
| TEB0912-02-ABI21-A | 11eg_1e_4gb           | REV02                | 4GB | 128MB      | NA   | 4GB PL DDR |       |

**Table 4: Hardware Modules**

Additional HW Requirements:

| Additional Hardware | Notes |
|---------------------|-------|
|                     |       |

**Table 5: Additional Hardware**

## 4.5 Content

---

For general structure and of the reference design, see [Project Delivery - Xilinx devices](#)<sup>2</sup>

<sup>1</sup> <https://wiki.trenz-electronic.de/display/PD/TE+Board+Part+Files>

<sup>2</sup> <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+Xilinx+devices>

### 4.5.1 Design Sources

| Type      | Location  | Notes   |
|-----------|---|---|
| Vivado    | <design name>/<br>block_design<br><design name>/<br>constraints<br><design name>/ip_lib | Vivado Project will be generated by TE Scripts  |
| Vitis     | <design name>/<br>sw_lib  | Additional Software Template for Vitis and apps_list.csv with settings automatically for Vitis app generation |
| PetaLinux | <design name>/os/<br>petalinux  | PetaLinux template with current configuration   |

**Table 6: Design sources**

### 4.5.2 Additional Sources

| Type    | Location                       | Notes   |
|---------|--------------------------------|---|
| SI5395  | <design name>/misc/SI5395      | SI5395 Project with current PLL Configuration |
| init.sh | <design name>/misc/init_script | Additional Initialization Script for Linux    |

**Table 7: Additional design sources**

### 4.5.3 Prebuilt

| File             | File-Extension | Description  |
|------------------|----------------|--|
| BIF-File         | *.bif          | File with description to generate Bin-File                     |
| BIN-File         | *.bin          | Flash Configuration File with Boot-Image (Zynq-FPGAs)          |
| BIT-File         | *.bit          | FPGA (PL Part) Configuration File                              |
| DebugProbes-File | *.ltx          | Definition File for Vivado/Vivado Labtools Debugging Interface |
| Diverse Reports  | ---            | Report files in different formats                              |

| File                                  | File-Extension | Description  |
|---------------------------------------|----------------|--|
| Hardware-Platform-Specification-Files | *.xsa          | Exported Vivado Hardware Specification for Vitis and PetaLinux               |
| LabTools Project-File                 | *.lpr          | Vivado Labtools Project File   |
| OS-Image                              | *.ub           | Image with Linux Kernel (On Petalinux optional with Devicetree and RAM-Disk) |
| Software-Application-File             | *.elf          | Software Application for Zynq or MicroBlaze Processor Systems                |

**Table 8: Prebuilt files (only on ZIP with prebuilt content)**

#### 4.5.4 Download

Reference Design is only usable with the specified Vivado/SDK/PetaLinux/SDx version. Do never use different Versions of Xilinx Software for the same Project.

Reference Design is available on:

- [TEB0912 "Test Board" Reference Design<sup>3</sup>](https://shop.trenz-electronic.de/Download/?path=Trenz_Electronic/Motherboards_and_Carriers/TEB0912/Reference_Design/2019.2/test_board)

<sup>3</sup> [https://shop.trenz-electronic.de/Download/?path=Trenz\\_Electronic/Motherboards\\_and\\_Carriers/TEB0912/Reference\\_Design/2019.2/test\\_board](https://shop.trenz-electronic.de/Download/?path=Trenz_Electronic/Motherboards_and_Carriers/TEB0912/Reference_Design/2019.2/test_board)

## 5 Design Flow

**!** Reference Design is available with and without prebuilt files. It's recommended to use TE prebuilt files for first lunch.

Trenz Electronic provides a tcl based built environment based on Xilinx Design Flow.

See also:

- [Xilinx Development Tools](#)<sup>4</sup>
- [Vivado Projects - TE Reference Design](#)<sup>5</sup>
- [Project Delivery](#).<sup>6</sup>

The Trenz Electronic FPGA Reference Designs are TCL-script based project. Command files for execution will be generated with "\_create\_win\_setup.cmd" on Windows OS and "\_create\_linux\_setup.sh" on Linux OS.

TE Scripts are only needed to generate the vivado project, all other additional steps are optional and can also be executed by Xilinx Vivado/SDK GUI. For currently Scripts limitations on Win and Linux OS see: [Project Delivery Currently limitations of functionality](#)<sup>7</sup>

1. \_create\_win\_setup.cmd/\_create\_linux\_setup.sh and follow instructions on shell:

```

C:\WINDOWS\system32\cmd.exe
B:\Design\cores\2018.2\design\TEB0911\test_board>setlocal
-----Set design paths-----
-- Run Design with: _create_win_setup
-- Use Design Path: B:\Design\cores\2018.2\design\TEB0911\test_board\
-----TE Reference Design-----
-- (c) Go to CMD-File Generation (Manual setup)
-- (d) Go to Documentation (Web Documentation)
-- (x) Exit Batch (nothing is done!)
-- (0) Create minimum setup of CMD-Files and exit Batch
-- (1) Create maximum setup of CMD-Files and exit Batch
-----
Select (ex.:\'0\' for min setup):

```

2. Press 0 and enter to start "Module Selection Guide"
3. (optional Win OS) Generate Virtual Drive or use short directory for the reference design (for example x: \<design name>)
4. Create Project (follow instruction of the product selection guide), settings file will be configured automatically during this process
  - a. (optional for manual changes) Select correct device and Xilinx install path on "design\_basic\_settings.cmd" and create Vivado project with "vivado\_create\_project\_guiemode.cmd"

Note: Select correct one, see also [TE Board Part Files](#)<sup>8</sup>
5. Create HDF and export to prebuilt folder
  - a. Run on Vivado TCL: TE::hw\_build\_design -export\_prebuilt

Note: Script generate design and export files into \prebuilt\hardware\<short dir>. Use GUI is the same, except file export to prebuilt folder
6. Create Linux (uboot.elf and image.ub) with exported XSA
  - a. XSA is exported to "prebuilt\hardware\<short name>"

Note: HW Export from Vivado GUI create another path as default workspace.

<sup>4</sup> <https://wiki.trenz-electronic.de/display/PD/Xilinx+Development+Tools#XilinxDevelopmentTools-XilinxSoftware-BasicUserGuides>

<sup>5</sup> <https://wiki.trenz-electronic.de/display/PD/Vivado+Projects+-+TE+Reference+Design>

<sup>6</sup> <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+Xilinx+devices>

<sup>7</sup> <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+Xilinx+devices#ProjectDeliveryXilinxdevices-Currentlylimitationsoffunctionality>

<sup>8</sup> <https://wiki.trenz-electronic.de/display/PD/TE+Board+Part+Files>

Create Linux images on VM, see [PetaLinux KICKstart](#)<sup>9</sup>

- i. Use TE Template from /os/petalinux
7. Add Linux files (uboot.elf and image.ub) to prebuilt folder
  - a. "prebuilt\os\petalinux\
8. Generate Programming Files with Vitis
  - a. Run on Vivado TCL: TE::sw\_run\_vitis -all  
Note: Scripts generate applications and bootable files, which are defined in "sw\_lib\apps\_list.csv"
  - b. (alternative) Start SDK with Vivado GUI or start with TE Scripts on Vivado TCL: TE::sw\_run\_vitis  
Note: TCL scripts generate also platform project, this must be done manually in case GUI is used. See [Vitis](#)<sup>10</sup>

---

<sup>9</sup> <https://wiki.trenz-electronic.de/display/PD/PetaLinux+KICKstart>

<sup>10</sup> <https://wiki.trenz-electronic.de/display/PD/Vitis>

## 6 Launch

---

### 6.1 Programming

---

 Check Module and Carrier TRMs for proper HW configuration before you try any design.

Xilinx documentation for programming and debugging: [Vivado/SDK/SDSoC-Xilinx Software Programming and Debugging](#)<sup>11</sup>

#### 6.1.1 Get prebuilt boot binaries

---

1. `_create_win_setup.cmd/_create_linux_setup.sh` and follow instructions on shell
2. Press 0 and enter to start "Module Selection Guide"
  - a. Select assembly version
  - b. Validate selection
  - c. Select Create and open delivery binary folder
 

Note: Folder (`<project folder>/_binaries_<Artikel Name>`) with subfolder (`boot_<app name>`) for different applications will be generated

#### 6.1.2 QSPI

---

Optional for `Boot.bin` on QSPI Flash and `image.ub` on SD.

1. Connect JTAG and power on carrier with module
2. Open Vivado Project with `"vivado_open_existing_project_guiemode.cmd"` or if not created, create with `"vivado_create_project_guiemode.cmd"`
3. Type on Vivado TCL Console: `TE::pr_program_flash_binfile -swapp u-boot`  
 Note: To program with SDK/Vivado GUI, use special FSBL (`zynqmp_fsb_flash`) on setup  
 Optional `"TE::pr_program_flash_binfile -swapp hello_teb0912"` possible
4. Copy `image.ub` and optional `misc/sd/init.sh` on SD-Card
  - use files from (`<project folder>/_binaries_<Artikel Name>/boot_linux`) from generated binary folder, see: [Get prebuilt boot binaries](#) (see page 12)
  - or use prebuilt file location, see `<design_name>/prebuilt/readme_file_location.txt`
5. Insert SD-Card

#### 6.1.3 SD

---

1. Copy `image.ub`, `Boot.bin` and `misc/sd/init.sh` on SD-Card.
  - use files from (`<project folder>/_binaries_<Artikel Name>/boot_linux`) from generated binary folder, see: [Get prebuilt boot binaries](#) (see page 12)
  - or use prebuilt file location, see `<design_name>/prebuilt/readme_file_location.txt`
2. Set Boot Mode to SD-Boot.
  - Depends on CPLD Firmware, see `<todo>`
3. Insert SD-Card in SD-Slot.

---

<sup>11</sup> <https://wiki.trenz-electronic.de/display/PD/Xilinx+Development+Tools#XilinxDevelopmentTools-XilinxSoftwareProgrammingandDebugging>

## 6.1.4 JTAG

---

Not used on this Example.

## 6.2 Usage

---

1. Prepare HW like described on section [Programming](#)(see page 12)
  2. Connect UART USB (same as FPGA JTAG)
  3. Select SD Card as Boot Mode (or QSPI - depending on step 1)
  4. (Optional) Insert PCIe Card (detection depends on Linux driver. Only some basic drivers are installed)
  5. (Optional) Connect DisplayPort Monitor (List of usable Monitors: <https://www.xilinx.com/support/answers/68671.html>)
  6. (Optional) Connect Network Cable
  7. Power On PCB
- Note: 1. ZynqMP Boot ROM loads PMU Firmware and FSBL from SD into OCM, 2. FSBL loads ATF(bl31.elf) and U-boot from SD/QSPI into DDR, 3. U-boot load Linux from SD into DDR.

### 6.2.1 Linux

---

1. Open Serial Console (e.g. putty)
  - a. Speed: 115200
  - b. COM Port: Win OS, see device manager, Linux OS see `dmesg |grep tty` (UART is \*USB1)
2. Linux Console:
 

Note: Wait until Linux boot finished For Linux Login use:

  - a. User Name: root
  - b. Password: root
3. You can use Linux shell now.
  - a. I2C 0 Bus type: `i2cdetect -y -r 0`
  - b. ETH0/1 works with `udhcpc`
  - c. PCIe type "`lspci`"

### 6.2.2 Vivado HW Manager

---

Control:

- User LED Control (D16, D15)

Monitoring:

- MGT CLK Measurement:
  - Open Vivado HW-Manager and add VIO signal to dashboard (\*.ltx located on prebuilt folder).Set radix from VIO signals to unsigned integer.Note: Frequency Counter is inaccurate and displayed unit is Hz
  - Default B229\_CLK1: 78,8MHz, B128\_CLK1: 150MHz, B129\_CLK1: 175MHz, B130\_CLK1: 200MHz, B228\_CLK1: 125MHz, B230\_CLK1: 100MHz

<todo>

# 7 System Design - Vivado

## 7.1 Block Design

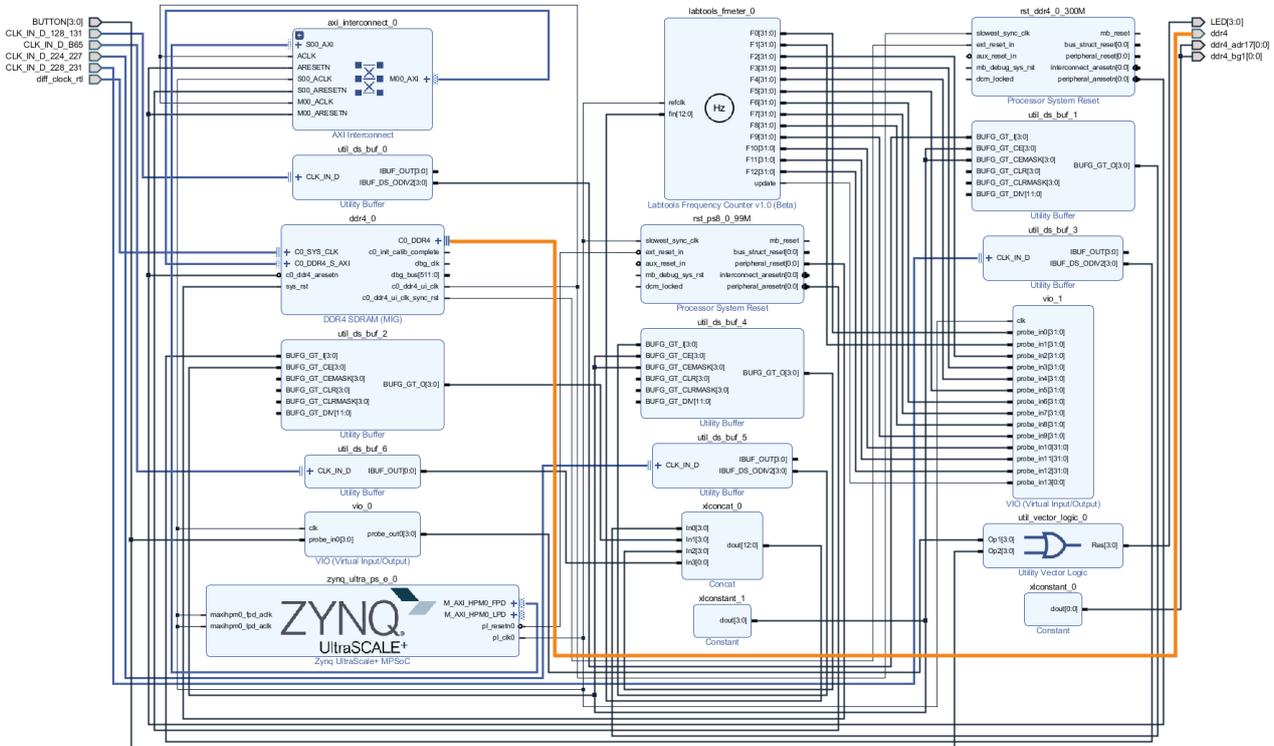

Figure 1: Block Design

### 7.1.1 PS Interfaces

Activated interfaces:

| Type  | Note |
|-------|------|
| DDR   |      |
| QSPI  | MIO  |
| SD1   | MIO  |
| CAN0  | MIO  |
| I2C0  | MIO  |
| I2C1  | MIO  |
| UART0 | MIO  |

| Type      | Note    |
|-----------|---------|
| GPI00---2 | MIO     |
| SWDT0..1  |         |
| TTC0..3   |         |
| GEM2      | MIO     |
| GEM3      | MIO     |
| PCIe      | MIO/GTP |

**Table 9: PS Interfaces**

## 7.2 Constrains

---

### 7.2.1 Basic module constrains

---

#### **\_i\_bitgen\_common.xdc**

```
set_property BITSTREAM.GENERAL.COMPRESS TRUE [current_design]
set_property BITSTREAM.CONFIG.UNUSEDPIN PULLNONE [current_design]
```

## 7.2.2 Design specific constrain

### **\_i\_io.xdc**

```

# AB34      MGT_128_CLK_P
# AB35      MGT_128_CLK_N
# W32       MGT_129_CLK_P
# W33       MGT_129_CLK_N
# R32       MGT_130_CLK_P
# R33       MGT_130_CLK_N

## 8 Software Design - Vitis

---

For SDK project creation, follow instructions from:

Vitis<sup>12</sup>

### 8.1 Application

---

SDK template in ./sw\_lib/sw\_apps/ available.

#### 8.1.1 zynqmp\_fsbl

---

TE modified 2019.2 FSBL

General:

- Modified Files: xfsbl\_main.c, xfsbl\_hooks.h/.c, xfsbl\_board.h/.c(search for 'TE Mod' on source code)
- Add Files: te\_xfsbl\_hooks.h/.c (for hooks and board)\n
- General Changes:
  - Display FSBL Banner and Device Name

Module Specific:

- Add Files: all TE Files start with te\_\*
  - Si5396 Configuration
  - PCIe and eth reset

#### 8.1.2 zynqmp\_fsbl\_flash

---

TE modified 2019.2 FSBL

General:

- Modified Files: xfsbl\_initialisation.c, xfsbl\_hw.h, xfsbl\_handoff.c, xfsbl\_main.c
- General Changes:
  - Display FSBL Banner
  - Set FSBL Boot Mode to JTAG
  - Disable Memory initialisation

#### 8.1.3 zynqmp\_pmufw

---

Xilinx default PMU firmware.

#### 8.1.4 hello\_teb0912

---

Hello TEB0912 is a Xilinx Hello World example as endless loop instead of one console output.

---

<sup>12</sup> <https://wiki.trenz-electronic.de/display/PD/Vitis>

## 8.1.5 u-boot

---

U-Boot.elf is generated with PetaLinux. SDK/HSI is used to generate Boot.bin.

## 9 Software Design - PetaLinux

---

For PetaLinux installation and project creation, follow instructions from:

- [PetaLinux KICKstart](#)<sup>13</sup>

### 9.1 Config

---

Start with **petalinux-config** or **petalinux-config --get-hw-description**

Changes:

### 9.2 U-Boot

---

Start with **petalinux-config -c u-boot**

Changes:

- CONFIG\_ENV\_IS\_NOWHERE=y
- # CONFIG\_ENV\_IS\_IN\_SPI\_FLASH is not set

Change platform-top.h

---

<sup>13</sup> <https://wiki.trenz-electronic.de/display/PD/PetaLinux+KICKstart>

## 9.3 Device Tree

```

## 9.4 Kernel

---

Start with **petalinux-config -c kernel**

- Changes:
- # CONFIG\_CPU\_IDLE is not set
- # CONFIG\_CPU\_FREQ is not set
- CONFIG\_EDAC\_CORTEX\_ARM64=y
- CONFIG\_NVME\_CORE=y
- CONFIG\_BLK\_DEV\_NVME=y
- # CONFIG\_NVME\_MULTIPATH is not set
- CONFIG\_NVME\_TARGET=y
- # CONFIG\_NVME\_TARGET\_LOOP is not set
- # CONFIG\_NVME\_TARGET\_FC is not set
- CONFIG\_NVM=y
- CONFIG\_NVM\_PBLK=y
- CONFIG\_NVM\_PBLK\_DEBUG=y

## 9.5 Rootfs

---

Start with **petalinux-config -c rootfs**

Changes:

- CONFIG\_i2c-tools=y
- CONFIG\_busybox-httpd=y (for web server app)

- CONFIG\_packagegroup-petalinux-utils(util-linux,cpufrequtils,bridge-utils,mtd-utils,usbutils,pciutils,canutils,i2c-tools,smartmontools,e2fsprogs)

## 9.6 Applications

---

See: \os\petalinux\project-spec\meta-user\recipes-apps\

### 9.6.1 startup

---

Script App to load init.sh from SD Card if available.

### 9.6.2 webfwu

---

Webserver application accemble for Zynq access. Need busybox-httpd

## 10 Additional Software

---

No additional software is needed.

### 10.1 SI5395

---

File location <design name>/misc/SI5395/SI5395\*.slabtimeproj

General documentation how you work with these project will be available on [SI5395](#)<sup>14</sup>

### 11.2 Legal Notices

---

### 11.3 Data Privacy

---

Please also note our data protection declaration at <https://www.trenz-electronic.de/en/Data-protection-Privacy>

### 11.4 Document Warranty

---

The material contained in this document is provided "as is" and is subject to being changed at any time without notice. Trenz Electronic does not warrant the accuracy and completeness of the materials in this document. Further, to the maximum extent permitted by applicable law, Trenz Electronic disclaims all warranties, either express or implied, with regard to this document and any information contained herein, including but not limited to the implied warranties of merchantability, fitness for a particular purpose or non infringement of intellectual property. Trenz Electronic shall not be liable for errors or for incidental or consequential damages in connection with the furnishing, use, or performance of this document or of any information contained herein.

### 11.5 Limitation of Liability

---

In no event will Trenz Electronic, its suppliers, or other third parties mentioned in this document be liable for any damages whatsoever (including, without limitation, those resulting from lost profits, lost data or business interruption) arising out of the use, inability to use, or the results of use of this document, any documents linked to this document, or the materials or information contained at any or all such documents. If your use of the materials

<sup>16</sup> <https://wiki.trenz-electronic.de/display/~j.hartfiel>

or information from this document results in the need for servicing, repair or correction of equipment or data, you assume all costs thereof.

## 11.6 Copyright Notice

---

No part of this manual may be reproduced in any form or by any means (including electronic storage and retrieval or translation into a foreign language) without prior agreement and written consent from Trenz Electronic.

## 11.7 Technology Licenses

---

The hardware / firmware / software described in this document are furnished under a license and may be used / modified / copied only in accordance with the terms of such license.

## 11.8 Environmental Protection

---

To confront directly with the responsibility toward the environment, the global community and eventually also oneself. Such a resolution should be integral part not only of everybody's life. Also enterprises shall be conscious of their social responsibility and contribute to the preservation of our common living space. That is why Trenz Electronic invests in the protection of our Environment.

## 11.9 REACH, RoHS and WEEE

---

### **REACH**

Trenz Electronic is a manufacturer and a distributor of electronic products. It is therefore a so called downstream user in the sense of [REACH](#)<sup>17</sup>. The products we supply to you are solely non-chemical products (goods). Moreover and under normal and reasonably foreseeable circumstances of application, the goods supplied to you shall not release any substance. For that, Trenz Electronic is obliged to neither register nor to provide safety data sheet. According to present knowledge and to best of our knowledge, no [SVHC \(Substances of Very High Concern\) on the Candidate List](#)<sup>18</sup> are contained in our products. Furthermore, we will immediately and unsolicited inform our customers in compliance with REACH - Article 33 if any substance present in our goods (above a concentration of 0,1 % weight by weight) will be classified as SVHC by the [European Chemicals Agency \(ECHA\)](#)<sup>19</sup>.

### **RoHS**

Trenz Electronic GmbH herewith declares that all its products are developed, manufactured and distributed RoHS compliant.

### **WEEE**

Information for users within the European Union in accordance with Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on waste electrical and electronic equipment (WEEE).

Users of electrical and electronic equipment in private households are required not to dispose of waste electrical and electronic equipment as unsorted municipal waste and to collect such waste electrical and electronic equipment separately. By the 13 August 2005, Member States shall have ensured that systems are set up allowing final holders and distributors to return waste electrical and electronic equipment at least free of charge. Member States shall ensure the availability and accessibility of the necessary collection facilities. Separate collection is the precondition to ensure specific treatment and recycling of waste electrical and electronic equipment and is necessary to achieve the chosen level of protection of human health and the environment in the European Union.

---

<sup>17</sup> <http://guidance.echa.europa.eu/>

<sup>18</sup> <https://echa.europa.eu/candidate-list-table>

<sup>19</sup> <http://www.echa.europa.eu/>

Consumers have to actively contribute to the success of such collection and the return of waste electrical and electronic equipment. Presence of hazardous substances in electrical and electronic equipment results in potential effects on the environment and human health. The symbol consisting of the crossed-out wheeled bin indicates separate collection for waste electrical and electronic equipment.

Trenz Electronic is registered under WEEE-Reg.-Nr. DE97922676.
